

FUEL POLISHING

Samples of dirty fuel.

What is it? Fuel polishing is the removal of water, sediment and microbial contamination from diesel. Fuel contamination builds up over time in stored fuels if it isn't tested and treated on a regular basis.

High Capacity Mobile Fuel Polishing System

You asked and we answered! In 2016 we made a major investment on this state of the art system to better serve our customers fuel polishing needs!

AXI INTERNATIONAL MTC HC-50

Before and after fuel samples alongside the sock filters used in this filtering process with the sediment filtered out of the fuel.

Before & After Fuel Polishing.

Have Your Generator Fuel Tested For FREE!

Are you sure the fuel in your generator is good and will work when you need it most? We will send a technician out to check your fuel for water, bacteria, oxidation and overall quality. We will pull a sample from the bottom of your tank, so you can see exactly what it looks like. We will then email you a report with our findings and recommendations. You will have peace of mind knowing if your fuel is dependable or if you need to take action to have it polished.

No Obligation! (Dade, Broward & Palm Beach Only)

Dirty fuel filters after polishing!

WHAT IF THE PROBLEM IS IGNORED?

Not treating the fuel problem will allow it to progress until it shuts down the filters, pumps and engines that depend on it.
