

# HURRICANE SEASON

## NOW IS THE TIME TO PREPARE!

### 1. Have The Fuel in Your Generator Tested!

Are you sure that the fuel in your generator is still good and will work when you need it the most? We will send a technician out to check your fuel for water, bacteria, oxidation and overall quality of your fuel. We will pull a sample from the bottom of your tank, so you can see exactly what it looks like. We will then send you a report with our recommendations. You will have peace of mind knowing if your fuel is still dependable or if you need to take action to have it filtered or polished. (Dade, Broward & Palm Beach Only)

### 2. Sign Up For Priority Status

**\*\*LIMITED AVAILABILITY\*\***

We now offer a Priority Program that will give you priority status for fuel deliveries before and after a hurricane. By law, we are required to serve law enforcement, hospitals, emergency facilities and other critical needs first; however having priority status will put you in the group of deliveries to be scheduled immediately following. Only a limited number of customers can be in this group, so call now to join!

### 3. Top Off Your Tanks

Prior to Hurricane Season we strongly encourage you to top off your generator tanks. Do not wait until a storm is approaching! We get inundated with calls at this time and may not have enough time to get to everyone before the storm arrives.

### 4. Review Your Tanks Size and Capabilities

Find out exactly how long a full tank of fuel will last in your generator when it is running at full load. It needs to be able to run for days, not just a few hours! If you don't know, call your generator supplier or service company.

### 5. Treat Your Fuel With A Stabilizer

Today's Ultra Low Sulfur Diesel is very unstable and is susceptible to bacteria growth when stored for any length of time. Bacteria and sludge from unstable fuel will cause plugged fuel filters that can shut generators down. Our generator-grade diesel fuel will be treated with Valvtect Bioguard Plus 6, which is specially formulated to:

- ◆ Prevent Bacteria Growth
- ◆ Stabilize the Fuel for Up to 2 years
- ◆ Prevent Sludge and Plugged Fuel filters
- ◆ Keep your generator running when you need it

***"It's not about IF we will have another hurricane;  
it's about WHEN we will have another hurricane."  
- George M. Tokesky, Federal Disaster Consultant***
